

## ANDROID STATIC ANALYSIS REPORT

NetMirror (3.0)

File Name:

s97ku2.apk

Package Name:

app.netmirror.netmirrornew

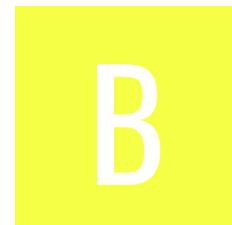

Scan Date:

Nov. 1, 2025, 12:09 p.m.

App Security Score:

**42/100 (MEDIUM RISK)**

Grade:

HIGH	MEDIUM	INFO	SECURE	HOTSPOT
5	7	1	2	1

## FILE INFORMATION

**File Name:** s97ku2.apk

**Size:** 49.31MB

**MD5:** aa76bd1becae0c3f8a70d2ecacc4b10d

**SHA1:** 59c1569efb4aabf9d35bb60d2b437e23005e4a46

**SHA256:** 70af4ac2a7ec38b06de4fc6d18dc6df7ddc2095bb8129f0f84860dc995dc0c

## APP INFORMATION

**App Name:** NetMirror

**Package Name:** app.netmirror.netmirrornew

**Main Activity:** app.netmirror.netmirrornew.MainActivity

**Target SDK:** 35

**Min SDK:** 24

**Max SDK:**

**Android Version Name:** 3.0

**Android Version Code:** 1

## APPLICATION PERMISSIONS

PERMISSION	STATUS	INFO	DESCRIPTION
android.permission.INTERNET	normal	full Internet access	Allows an application to create network sockets.

PERMISSION	STATUS	INFO	DESCRIPTION
android.permission.WRITE_SETTINGS	dangerous	modify global system settings	Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.
android.permission.ACCESS_NETWORK_STATE	normal	view network status	Allows an application to view the status of all networks.
android.permission.ACCESS_WIFI_STATE	normal	view Wi-Fi status	Allows an application to view the information about the status of Wi-Fi.
app.netmirror.netmirrornew.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION	unknown	Unknown permission	Unknown permission from android reference
com.google.android.finsky.permission.BIND_GET_INSTALL_REFERRER_SERVICE	normal	permission defined by google	A custom permission defined by Google.

## NETWORK SECURITY

NO	SCOPE	SEVERITY	DESCRIPTION

# CERTIFICATE ANALYSIS

HIGH: 2 | WARNING: 0 | INFO: 1

TITLE	SEVERITY	DESCRIPTION
Signed Application	info	Application is signed with a code signing certificate
Application signed with debug certificate	high	Application signed with a debug certificate. Production application must not be shipped with a debug certificate.
Certificate algorithm vulnerable to hash collision	high	Application is signed with SHA1withRSA. SHA1 hash algorithm is known to have collision issues.

# MANIFEST ANALYSIS

HIGH: 2 | WARNING: 1 | INFO: 0 | SUPPRESSED: 0

NO	ISSUE	SEVERITY	DESCRIPTION
1	App can be installed on a vulnerable unpatched Android version Android 7.0, [minSdk=24]	high	This application can be installed on an older version of android that has multiple unfixed vulnerabilities. These devices won't receive reasonable security updates from Google. Support an Android version => 10, API 29 to receive reasonable security updates.
2	Clear text traffic is Enabled For App [android:usesCleartextTraffic=true]	high	The app intends to use cleartext network traffic, such as cleartext HTTP, FTP stacks, DownloadManager, and MediaPlayer. The default value for apps that target API level 27 or lower is "true". Apps that target API level 28 or higher default to "false". The key reason for avoiding cleartext traffic is the lack of confidentiality, authenticity, and protections against tampering; a network attacker can eavesdrop on transmitted data and also modify it without being detected.

NO	ISSUE	SEVERITY	DESCRIPTION
3	Broadcast Receiver (androidx.profileinstaller.ProfileInstallReceiver) is Protected by a permission, but the protection level of the permission should be checked. Permission: android.permission.DUMP [android:exported=true]	warning	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
